

ABSTRACT

Mounting assembly includes a junction box having a top wall and a downwardly extending side wall defining a cavity therein. A fixture support is provided on the junction box that has a first use position and a second use position, and the fixture support is movable from the first use position to the second use position. The junction box may include a fixture support attached to the junction box, and a first fixture fastener provided on the fixture support. The first fixture fastener may be sized for securing a first type of fastener. A second fixture fastener sized for securing a second size of fastener may be provided on the fixture support. The fixture support may be rotated between a use position for the first fixture fastener and a non-use position for the first fixture fastener. The first and second fixture fasteners may be sized for receiving, respectively, different sizes of fasteners.
